Masticating Juicers

Fruits or vegetables are insert into a Chamber and contacts a screw or auger type mechanism that breaks down the plant material and then presses it against the housing, straining screen or crushes it. The slowly rotating mechanism creates great pressing force on the fruit and vegetable matter and forces the juice out of this plant matter leaving a very dry pulp material that is automatically eject. This slow rotating mastication process minimizes heat and oxidation of the juice to preserve nutrient value. This method tends to provide a more pulpy and fibrous juice. Use requires reasonable force to insert hard fruits and vegetables into the feed chute and press against the auger or screw mechanism. Large fruits and vegetables must be cutting up into smaller chunks. Attachments make machines more versatile in preparing nut butters, pureed foods and pastas. Quieter operation than centrifugal juicers.

Their squeezing system stands out in relation to the rest because:

- It doesn't extract the oil from the peel
- The juice doesn't pass over the peel on its "journey" to the glass or jug
- Return is very high, because it extracts the juice from the pulp remains the pulp as a residue material from the machine.
- Multi-purpose wheat grass, fruit and vegetable juicer
- Single Aluminum auger screw design with stainless steel screens.
- Low 350 revolutions per minute speed minimize juice frothing, heat and oxidation and maximize nutrition from your juice.
- Large round feed chute allows big pieces of fruits and vegetables to be insert.
- Automatic pulp ejection for continuous juicing.
- Quiet and efficient high yield operation.
- Unique design looks great in storage on your counter.
- Built-in reverse prevents clogging.
- Revolutionary easy to assemble/disassemble design makes unit easy to clean and operate.

Application of masticating juicers

A masticating juicer is especially good at juicing the very important green leafy vegetables such as wheat grass, spinach, parsley, cilantro, kale, Swiss Chard, orange, Acai berry, Pomegranate,

pineapple, sweet lime, etc. While a centrifugal juicer can juice green leafy vegetables, the centrifugal juicer is nowhere near as efficient as a masticating juicer in this regard.

Available Model of masticating Juicers

Model No	Jas-1003 (I)	Jas-1003(II)	Jas-1004 (I)
Motor	0.75 H. P.	0.5 H. P.	0.25 H. P.
RPM of machine	350	350	350
Capacity Kg/Hr.	160	130	90
Size in inch	21 X 9 X 22.5	19 X 8.5X 21	17 X 8.5 X 19
Drive	Double V Belt	Double V Belt	Single V Belt
